

Tips for Open WiFi:

- *Ensure that you are connecting to the correct SSID or WIFI service and not a false connection that someone has setup as a trap.*
- *Only Access Non-Sensitive data in these locations that will do the least amount of harm to you if the information was to fall into the wrong hands.*
- *Turn off File Sharing so that someone on the same network cannot browse your files and possibly gain access to your data.*
- *Running a Security Software Suite can protect your laptop from most intrusions while on the network.*
- *If possible, setup a VPN with an outside computer and connect to that computer to access the internet via that computer. This will create an encrypted tunnel for you to get to the internet. This is by far your safest vehicle when using these types of connections. If you do not have the resources to do this on your own or abilities, there are sites available that will allow you to do this listed below. We are in no way affiliated with these companies, and of course there are some free services as well, but then you have to deal with advertisements and the trust issues.*

- www.provpnaccounts.com-----\$14.22/month
- www.slickproxy.com -----\$14.00/month
- www.megaproxy.com -----\$9.95/month
